

## Week 5 summary (18 – 25.03.2015)

**Sprint target: Sending all messages between server and components (without backup) and mock of data message dispatcher**

**Status:**

Goal for sprint was not achieved – processing of messages in components is implemented, but not integrated yet. Integration and testing of those new features in components will be main goal for Week 6, alongside with backup server connection.

The reason for delay was constant changes in architecture of our solution – lack of deep analysis of problem of dispatching messages appeared to cause this.

**Goal for Week 6:**

Finalization of communication between Client, Server, Node and Manager. Adding support for backup server and exchanging synchronization messages.
